**LOCATION**

Boston

**CLIENT**

STV Inc.

**COST**

USD 75mm

**REPRESENTATIVE SERVICES**

3D Rendering and Animation; Architecture and Engineering production services

In the last 40 years, annual traffic through Boston's Logan Airport has tripled.

This has necessitated a variety of infrastructure upgrades including new runways and expanded terminals.

World renowned architecture firm STV Inc. has a long history of excellence with respect to transportation facilities; when they were tasked by the developer to design the aforementioned advancements, FSC was immediately brought on board to provide the 3D rendering and animation that would be used to support the developers presentation to the city of Boston.

After final investment decision, FSC was retained to provide architects meeting difficult qualification standards. Among them, all had to have at least 20 years of experience in airport design.

This was an example for FSC to do one of the things they do best: leverage a global community of A/E professionals to find the best talent for the job.

As a result of this project and many others, a highly rewarding 20 year relationship with STV Inc. continues to this day.
