

George Washington Bridge Bus Terminal

LOCATION

New York, New York

CLIENT

STV Inc.

COST

USD 100mm

REPRESENTATIVE SERVICES

3D Rendering and Animation;
Architecture and Engineering production services

In 2014, the George Washington Bridge Bus Terminal underwent a large modernization, including the addition of retail space and a beautification and expansion of public areas.

The owner of the project, the Port authority of New York and New Jersey, selected world renowned architecture firm STV Inc. to perform the design work. STV has a long history of excellence with respect to transportation facilities; when they were tasked by the developer to design the aforementioned advancements, FSC was immediately brought on board to provide the 3D rendering and animation that would be used to support the developer's presentation leading to final investment decision (FID).

After FID, FS Consulting was retained to provide architects to serve throughout the design and construction phases.

FSC performed production work on the construction documents, as well as a large portion of the ongoing engineering that is common post-construction.

The client as so satisfied with the work that they asked permission to directly hire an FSC team member. As of this writing, this person still works for STV and serves as an example of how deep this 20+ year working relationship runs.

As this project is ongoing, so is our rewarding relationship with STV Inc.
