

JetBlue Terminal, John F. Kennedy Airport

LOCATION
Queens, New York

CLIENT
D. Magnan & Co.,
Inc.

PROJECT COST
USD 200 Million

REPRESENTATIVE
SERVICES
Production services
for contractor

Through the 1990's and into the mid-2000's, JetBlue, as one of the world's fastest growing airlines, had grown increasingly underserved by existing infrastructure at JFK.

The Terminal 5 project covered more than 640,000 square feet and more than doubled the daily passenger capacity, allowing up to 250 flights per day, servicing roughly 20,000,000 passengers per year.

The project included a 20-lane TSA check, a baggage conveyor system, an extremely large passenger ticket area, as well as an expansive section for traveler amenities

including sundry stands, luxury retail stores, bars, restaurants, and fine dining.

The project also included a TSA bridge connecting the AirTrain with the terminal and a 1,500 space parking lot.

FSC served the client by providing detailed scaled drawings using a proprietary system creating the ability to layout entire floors in hours instead of weeks.

By virtue of this, handoff to the client was completed as planned, and the contractor enjoyed the operating efficiency required to meet profitability targets.
