

# Saudi Iron and Steel Company (Hadeed)

## LOCATION

Saudi Arabia

## CLIENT

Bechtel

## COST

USD 25B

## REPRESENTATIVE SERVICE

Management;  
Engineering for steel  
production facilities

Bechtel has an illustrious past with the Kingdom. Their Jubail Industrial City is one of the largest civil engineering accomplishments in the world today.

As Saudi Arabia has been the world's preeminent supplier of crude oil for the last 70 years, it stands to reason that their industrial capabilities should be equally prolific.

As part of the Jubail Industrial City, the Saudi Iron and Steel Company aligns well with that ideal. It is one of the largest steel products manufacturers in the world, and produces a full line of long, flat, and rolled iron and steel products, for export all over the world—almost 70 million metric tons worth in 2014.

When Bechtel was called upon to introduce a series of new steel making

units, they in turn called on FSC to provide management and engineering support.

The result was a series of new capabilities for Saudi Iron and Steel, namely a four-fold increase in capacity; and Bechtel enjoyed the expectation of high quality and efficiency to which they have grown accustomed when working with FSC.

As a result, the Bechtel relationship with FSC continues to this day.
