REPRESENTATIVE SERVICES

Existing Conditions
Survey, Construction
Documents,
Rendering

Established in 1867 by the Franciscan Sisters of the Poor, St. Michael's Medical Center is a state-of-the-art facility which was the first in New Jersey to perform open heart surgery.

In furtherance of their goal remain in top form, FSC was brought on as part of a team to enhance hospital facilities.

FSC performed the delicate task of conducting an existing conditions survey inside a working hospital—operating rooms, consultation area, recovery facilities and all. This required a wide array of special procedures to prevent survey and medical equipment from interfering with each other.

FSC also performed production work on construction documents for the

prime architect, and provided renderings on an ad hoc basis.

Of all the unique challenges of this project, the biggest was working with a space occupied 24 hours per day.

For this work, FSC crafted a special team of individuals who were specially trained to perform their tasks to the highest level of quality, while being mindful of the dynamic environment around them.

FSC are qualified to perform exemplary service in any working condition, under any circumstance.

They welcome your challenge.
